Dear Hiring Manager,

I'm applying for the position of Software Development Engineer Intern, Summer 2021, in Arlington County (Req. ID: R-111347). Enfolded within this application is my resume detailing my project and work experiences and my qualifications.

Based on the job description, I find this potential opportunity of working at the Platforms team at Mastercard, both appealing and defiant. As a consultant, the projects I managed often implemented data management, statistical analysis, and software development to keep our solutions portable. Hence, this job matches my personal and professional interests, and I feel confident in generating good synergies and making valuable contributions to the team if I held such a position, given my quantitative professional and academic backgrounds.

If you have a brief moment, I would appreciate talking to you to ask you about the type of projects I would be working on if hired, and please reach me if you have any questions about my resume.

Kind regards,

Alejandro Álvarez
